

IPI Gym Command System

a KEYLESS programmable operating system for gymnasiums

The **Gym Command System** consists of a **Base Command Unit** and a remote relay box. The system is customized to the customer's specifications. It can be programmed for any combination of gym components and auxiliary equipment.

The **Base Control Unit** is a totally programmable controller with a 2 x 20 character, 200 page LCD display. The unit mounts in a Raco #942 - 3 gang metal box. Multiple Base Control units can be used. A single **Base Control Unit** should be centrally located in gym or **Base Control Units** should be installed at each end of the gym.

By adding relay boxes the system can control up to 256 combinations of gym components including basketball backstops, height adjusters, gym curtains and batting cages and 15 ampere auxiliary equipment such as stage lighting. Use the SCROLL LEFT and SCROLL RIGHT functions keys to review the gym component categories. The code numbers for each item can be entered and operated in its specific category.

The system has a four digit access code. Multiple access codes are programmable.

The system goes into a sleep mode when not in use after 30 seconds.

A system back up battery prevents loss of the functions stored.
